The invention relates to the identification and isolation of major histocompatibility (MHC) class II restricted T cell epitope (MHC-II celtoped) derived from the cancer antigen, NY ESO-1. The MHC-II epitopes I reptrated from the cancer antigen, NY ESO-1. The MHC-II epitopes I rom NY ESO-1 are recognised by CD4+ T Lymphocytes in an human leucocyte antigen (HLA) class II restricted manner, in particular HLA-DR or HLA-DR creaticted. The products of the gene are promising candidates for munorcherapeutic strategies for the prevention, treatment and diagnosis of patients with cancer. The cancer epitopes are useful as immunogen and vaccine to inhibit or to prevent cancer in a mammal by eliciting CD4+ T lymphocytes resulting in protection of the recipient from development of cancer and protection from metastasis, or by inhibiting the growth of cancer and protection from metastasis, or by inhibiting the growth of cancer peptides are also useful as diagnostic agent to detect the presence of cancer, to enhance the generation of antibody and/or CD8+ T cell responses against any given target antigen and/or hapten and to induce tunour-specific humoral-cancer mediated immunity against cancer. The present sequence is human NY ESO-1 peptide used in the characterisation of the NY ESO-1 epitope recognised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New NY-ESO cancer peptide or MHC class II restricted T cell epitopes, useful as immunogen and vaccine for inhibiting cancer in a mammal or as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human NY ESO-1 peptide #21 to characterise epitope recognised by TE4-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the identification and isolation of major histocompatibility (MHC) class II restricted T cell epitope (MHC-II epitopes epitope) derived from the cancer antigen, NV ESO-I. The MHC-II epitopes from NV ESO-I are recognised by CD4+ T lymphocytes in an human leucocyte antigen (HLA) class II restricted manner, in particular HLA-DR or HLA-DP centracted. The products of the gene are promising candidates for memorpharapeutic strategies for the prevention, treatment and diagnosis of patients with cancer. The cancer epitopes are useful as immunogen and vaccine to inhibit or to prevent cancer in amammal Dy eliciting CD4+ T lymphocytes resulting in protection of the recipient from development of cancer and protection from metaetasis or by inhibiting the growth of cancer and protection from metaetasis, or by inhibiting the growth of cells as diagnostic agent to detect the presence of cancer, to enhance the generation of antibody and/or CD8+ T cell responses against any given target antigen and/or hapten and to induce tumour-specific humoral mediated immunity against cancer. The present sequence is human NY ESO-I epitope recognised
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

tumour antigen, NY-ESO-1 (AAY52430) which can bind to MHC(major tumour antigen, NY-ESO-1 (AAY52430) which can bind to MHC(major histocompatibility Class II HIA-DR53 molecules, thereby stimulating proliferation of helper T-cells. CDNA encoding NY-ESO-1 was initially isolated from an oesophagus squamous cell cancer CDNA library. Tissue closalisation studies revealed it to be expressed at high levels in normal ovary and testis but not in normal colon, kidney, liver, brain, oesophagus and skin. It was expressed in certain tumours and tumour cell lines with some degree of frequency - these included melanoma specimens in other tumour types being sporadic. These NY-ESO-1-derived peptides may be used in methods and compositions used for the treatment, diagnosis and compositions used for the treatment, diagnosis and compositions used for the treatment, diagnosis and lung cancer, hepatoma, ovarian cancer, thyroid cancer, prostate cancer, clumphoma) and to stimulate the proliferation of T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; NY-ESO-1; HLA; human leukocyte antigen; CTL; cytotoxic T cell; HLA-A2; HLA-DR53; melanoma; adenocarcinoma; bladder carcinoma; non-small cell lung carcinoma; tumour status determination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                        The present sequence is given in a specification relating to a method for determining the status of a cancerous condition in a patient with a tumour that expresses NY-ESO-1. The method comprises assaying a sample taken from the patient for antibodies that specifically bind to the NY-ESO-1 and comparing the value obtained to a prior value obtained from assay of a prior sample taken from the patient. Any difference between the values is indicative of a change in status of the cancerous condition. The method is useful for determining whether a cancerous condition is progressing, regressing or remaining stable, in particular in patients receiving treatment for a melanoma, adenocarcinoma, non-small lung carcinoma or bladder carcinoma

                                                                                                                        The present sequence is given in a specification relating to a method for determining the status of a cancerous condition in a patient with a tumour that expresses NY-ESO-1. The method comprises assaying a sample taken from the patient for antibodies that specifically bind to the NY-ESO-1 and comparing the value obtained to a prior value obtained from the values is indicative of a change in status of the cancerous condition. The method is useful for determining whether a cancerous condition is progressing, regressing or remaining stable, in particular in patients receiving treatment for a melanoma, adenocarcinoma, non-small lung carcinoma or bladder carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NY-ESO-1; human; tumour rejection antigen precursor; SSX-2; WHC Class II; major histocompatibility complex; helper T cell; HLA-DR; cancer; muman leukocyte antigen-determining region; disease progression; disease regression; disease onset; body tissue; body fluid; enzyme label; radioactive label; monoclonal antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polypeptides binding to major histocompatibility complex class II human leukocyte antigen-determining region molecule having amino acid sequence found in tumor rejection antigen precursor used for stimulating proliferation of helper I cells.
stability of the disease) of a cancerous condition, involves determining the levels of NY-ESO-1 specific antibodies in a sample taken from a

helper T cells. The peptides can be administered to an HLA-DR positive subject in order to stimulate the helper T cells. An MHC class II HLA-DR-NY-ESO-1/SSX-2 complex expressed on the surface of a cell or present in free form is useful for this stimulation. The nucleic acid is useful for sometimes of a cell or present in stimulation, which involves contacting a subject screening for a cancerous condition, which involves contacting a subject approach in transfected with the immunoreactive cell (helper T cell), where interaction is indicative of cancer. In addition, a sample from a patient (for example, a body fluid or tissue) can be monitored for the amount of the complex present in the bloodstream. This is useful for determining regression, progression or onset of a cancerous condition. The method involves contacting the sample with a radioactive labelled or enzyme labelled monoclonal antibody which specifically binds with the

ö
screening for a cancerous condition, which involves contacting a subject sample to a cell line transfected with the immunoreactive cell (helper T cell), where interaction is indicative of cancer. In addition, a sample from a patient (for example, a body fluid or tissue) can be monitored for the amount of the complex present in the bloodstream. This is useful for determining regression, progression or onset of a cancerous condition. The method involves contacting the sample with a radioactive labelled or enzyme labelled monoclonal antibody which specifically binds with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the identification and isolation of major histocompatibility (MHC) class II restricted T cell epitope (MHC-II epitopes derived from the cancer antigen, NY ESO-I. The MHC-II epitopes from NY ESO-I are recognised by CD4+T lymphocytes in an human leucocyte antigen (HLA) class II restricted manner, in particular HLA-DR or HLA-DR immunotherapeutic strategies for the gene are promising candidates for immunotherapeutic strategies for the prevention, treatment and diagnosis of patients with cancer. The cancer epitopes are useful as immunogen and vaccine to inhibit or to prevent cancer in a mammal by eliciting CD4+T lymphocytes resulting in protection of the recipient from development of cancer and protection from metastasis, or by inhibiting the growth of cells expressing the NY-ESO-I gene product. The cancer peptides are also useful as diagnostic agent to detect the presence of cancer, to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New NY-ESO cancer peptide or MHC class II restricted T cell epitopes, useful as immunogen and vaccine for inhibiting cancer in a mammal or as protection from metastasis.

The sequence represents a human NY-ESO-1 tumour rejection antigen precursor fragment which recognises and binds to HLA-DR53. NY-ESO-1 and SSX-2 polypeptides, or fragments of, bind to major histocompatibility complex (WHC) Class II molecules such as human leukocyte antigendetermining region (HLA-DR) molecules and stimulate proliferation of helper T cells. The peptides can be administered to an HLA-DR positive subject in order to stimulate the helper T cells. An WHC Class II HLA-DR-NY-ESO-1/SSX-2 complex expressed on the surface of a cell or present in free form is useful for this stimulation. The nucleic acid is useful for

Polypeptides binding to major histocompatibility complex class II human leukocyte antigen-determining region molecule having amino acid sequence found in tumor rejection antigen precursor used for stimulating

Example 13; Page 19; 62pp; English.

proliferation of helper T cells.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ribosomal protein L6 - Bacillus stearothermophilus
N;Alternate names: ribosomal protein Bilo
C;Species: Bacillus stearothermophilus
C;Species: Bacillus stearothermophilus
C;Accession: A02766, B39085, S59061
R;Kimura, M.; Rawlings, N.; Appelt, K.
FBBS Lett. 136, S8-64, 1981
A;Title: The amino acid sequence of protein Bilo from the 50S subunit of the Bacillus st
A;Reference number: A02766
A;Recession: A02766
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A; Molecule type: protein

"Cloning and transcriptional analysis of the lipA (lipoic acid synthetase) gene from Rhizobium ethi.";

"FEMS Microbiol. Lett. 149:165-170(1997).

"I -!- FUNCTION: Catalyzes the radical-mediated insertion of two sulfur atoms into an acyl carrier protein (ACP) bound to an octanoyl group to produce a lipoyl group (By similarity).

"I -- CATALYTIC ACTIVITY: octanoyl-lacyl-carrier protein] + 2 sulfurs = lipoyl-[acyl-carrier protein].

"I -- COPACTOR: Binds 1 4Fe-4S cluster per subunit, and S-adenosyl-L-methionine (AdoMet) used for 5'-deoxyadenosyl radical generation (By similarity).

"I -- PATHWAY: Liposate biosynthesis; sulfur-insertion step.

"I -- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

"I -- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

"I -- SIMILARATY: Belongs to the biotin and lipoic acid synthetases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      15-JUL-1998 (Rel. 36, Created)
15-JUL-1998 (Rel. 36, Last sequence update)
15-JUL-2004 (Rel. 44, Last annotation update)
Lipoyl synthase (BC 2.8.1.-) (Lipoyl synthase) (Lipoyl synthase (BC 2.8.1.-) (Lipoyl synthase)
(Lipoyl-acyl-carrier protein synthase) (Sulfur insertion protein lipA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=97286510; PubMed=9141657; DOI=10.1016/S0378-1097(97)00069-4;

"The genome of the natural genetic engineer Agrobacterium tumefaciens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             --- FUNCTION: Catalyzes the radical-mediated insertion of two sulfur atoms into an acyl carrier protein (ACP) bound to an octanoyl group to produce a lipoyl group (By similarity).
--- CATALYTIC ACTIVITY: octanoyl-[acyl-carrier protein] + 2 sulfurs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lipoyl-[acyl-carrier protein].
COFACTOR: Binds 1 4Fe-4S cluster per subunit, and S-adenosyl-L-methionine (AdoMet) used for 5'-deoxyadenosyl radical generation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PATHWAY: Lipoate biosynthesis; sulfur-insertion step. SUBCELLULAR LOCATION: Cytoplasmic (Potential). SIMILARITY: Belongs to the biotin and lipoic acid synthetases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 8, Al

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 17, P
